

Custom Printed Faceplates and Overlays Enhance Applications from Set Top Boxes to High Temperature PC Boards

Fabrico can custom print your labels, faceplates, and overlays in a variety of material configurations, using any number of printing processes to support applications such as process tracking labels, overlays for set top boxes, high temperature bar code labels for PC boards, customizable thermal transfer labels, and identification materials. With a large inventory of available materials that are already UL/CSA approved, we offer high-speed, rotary printing in a variety of processes including flexographic, letterpress, screen, hot stamping, and digital printing. Our expert process engineers can help choose the most effective method of production for your project from a multitude of press and material options. Precision converting options include inline rotary, flatbed, punch press, and laser cutting for connectors, pins, and actuator holes that are clean, burr-free, and distortion-free.

Unlimited Customizable Options Give Your Application a Unique Appeal, and Sets it Apart from the Competition

Many customized options are available for specific usage requirements. Optically clear viewing windows can be created using translucent inks or clean cut laminated films for improved readability. Variable numbering, 2D bar codes and other data can be added for enhanced product identification and tracking. Embossing or debossing can raise or lower letters for ease of use in low-light or difficult to access locations.

For durability and long life, UV inhibitors may be added to materials to provide sun, water and temperature resistance in outdoor or high-light applications, and a textured, hard-coat, and scratch resistant lamination can provide additional protection in rough conditions.

Overlays up to 15 mils thick can be produced to adhere to any surface and fit any shape or configuration for a variety of components.

Fabrico's custom printed faceplates and overlays serve as identification, decoration, warning and instruction for a wide range of product applications.

Selecting the Right Converter

Fabrico offers their design engineering expertise to help customers determine the specific requirements, select the best materials and adhesives, and choose the label type, such as pressure-sensitive, that works best for their application and environment. With the proper combination of those factors, markings and labels can last for decades even in the harshest conditions, such as chemical exposure, oily or slick surfaces, and wet or humid conditions. Through the use of Fabrico's extensive printing and labeling experience, customers can ensure their markings and labels will have high bonding strength and durability on a variety of surfaces, including metals, inert plastic, epoxy, ceramic, etc. With more than 30 years of materials experience, Fabrico engineers understand the impact a material selection can have on the overall manufacturing process, therefore, material systems are designed to optimize production efficiency and improve overall cost-effectiveness.

Quality Control

With a fully equipped test lab, Fabrico ensures that customer materials meet designed-in specs before they leave the factory floor, often eliminating the need to test materials on the customer end. Fabrico uses its laboratory to test adhesion, tensile, and dielectric strengths, as well as coat weight, resistance, capacitance, and voltage measurements. Fabrico's test and measurement equipment is calibrated annually per the ISO standard.

About Fabrico

Fabrico is the market leader in design and manufacturing services for flexible materials. Fabrico has developed a track record of solving unique challenges and providing sound customer solutions. The company offers a wide range of custom fabrication services including product engineering, material sourcing, prototyping, converting, laminating, complex printing, custom die-cutting, rotary die-cutting, water jet cutting, laser cutting, assembly, and performance packaging. Fabrico's Advanced Assembly capabilities apply design-for-manufacturing principles to complex, high-value projects in demanding markets that include electrical/electronics, medical, military/aerospace, power generation, renewable energy, and transportation. Fabrico is located in Kennesaw, GA, USA and is a division of EIS. More information is available at www.fabrico.com or by calling (800)-351-8273. Fabrico is a trademark of EIS, Inc.
